

Email Set-up with Bluehost

Webmail Access

These instructions are for accessing email from any computer:

1. Type in your website address (website.com/webmail)
2. Type in your email and password
3. Then it will take you to a screen to choose a webmail application. See the bottom of this link:
<https://my.bluehost.com/cgi/help/webmail>

Microsoft Outlook 2010

<https://my.bluehost.com/cgi/help/outlook-2010>

- We always, always recommend IMAP
- Mail server for incoming and outgoing will be mail.yourwebsite.com
- For bullet points (8 & 9) on the above link, you will probably not be using SSL. So on #8, leave the port at 143. On #9 change the port to 26.
- Follow the rest of the directions otherwise.

Microsoft Outlook 2013

<https://my.bluehost.com/cgi/help/outlook-2013>

- We always, always recommend IMAP
- Mail server for incoming and outgoing will be mail.yourwebsite.com
- For bullet points (5 under more settings) on the above link, you will probably not be using SSL. Use ports 143 and 26.
- Follow the rest of the directions otherwise.

Microsoft Outlook 2007

<https://my.bluehost.com/cgi/help/outlook-2007>

- We always, always recommend IMAP
- Mail server for incoming and outgoing will be mail.yourwebsite.com
- For bullet points (5 under more settings) on the above link, you will probably not be using SSL. Use ports 143 and 26.
- Follow the rest of the directions otherwise.

Android Phones Email Setup

<https://my.bluehost.com/cgi/help/android>
